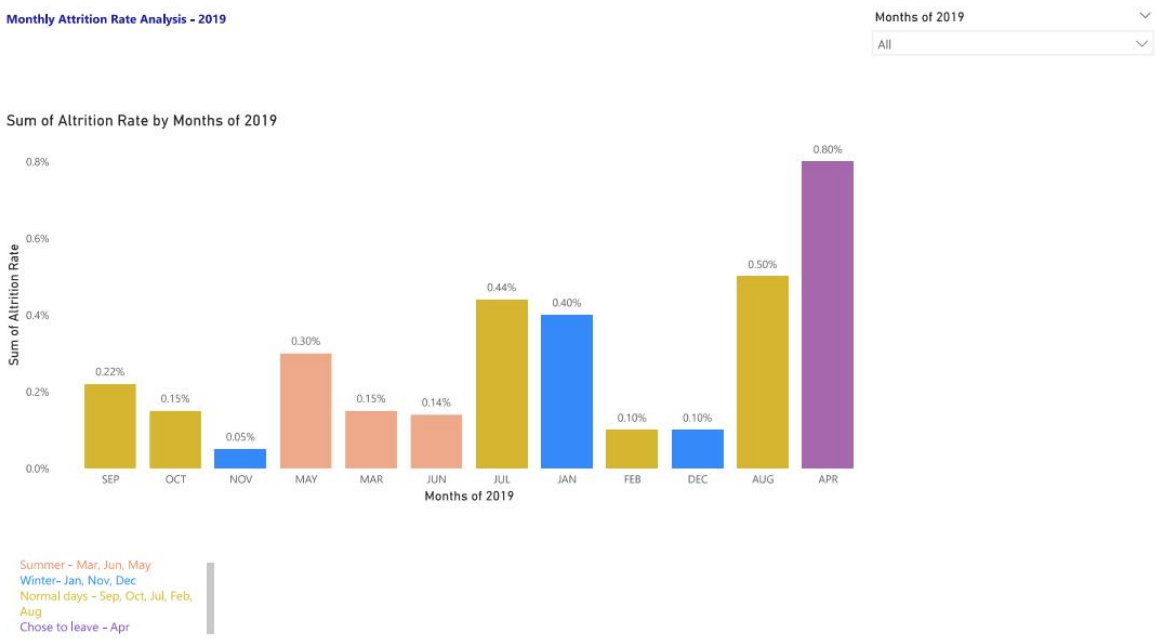
Assignment 1 - Improve Table 3.2 - Reducing Clutter

Introduction

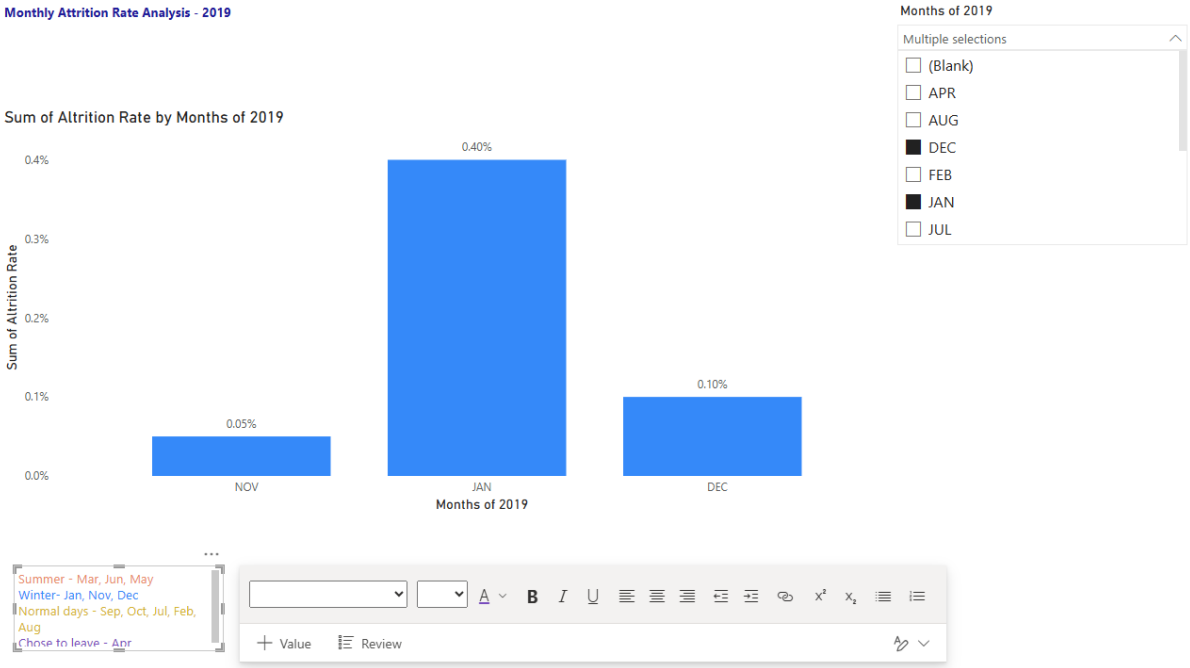
This report presents an analysis of the **Monthly Attrition Rate** for the year 2019. It highlights patterns in employee exits across different months, with a particular focus on seasonal trends. The visual breakdown enables HR teams to understand turnover behaviour and plan strategies for employee retention.



Key Insights from the visuals:

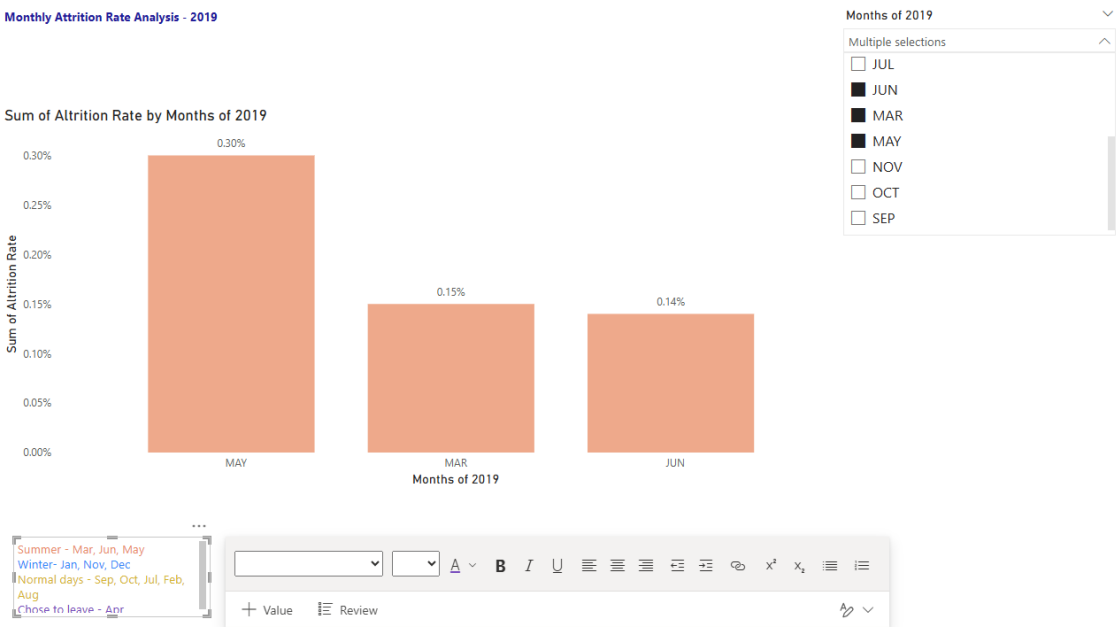
1.) Winter Attrition (January, November, December)

- January had the highest winter attrition rate (0.40%), indicating a post-holiday job switch trend.
- November and December had the lowest attrition rates (0.05% and 0.10%), suggesting employees tend to stay during the holiday season.



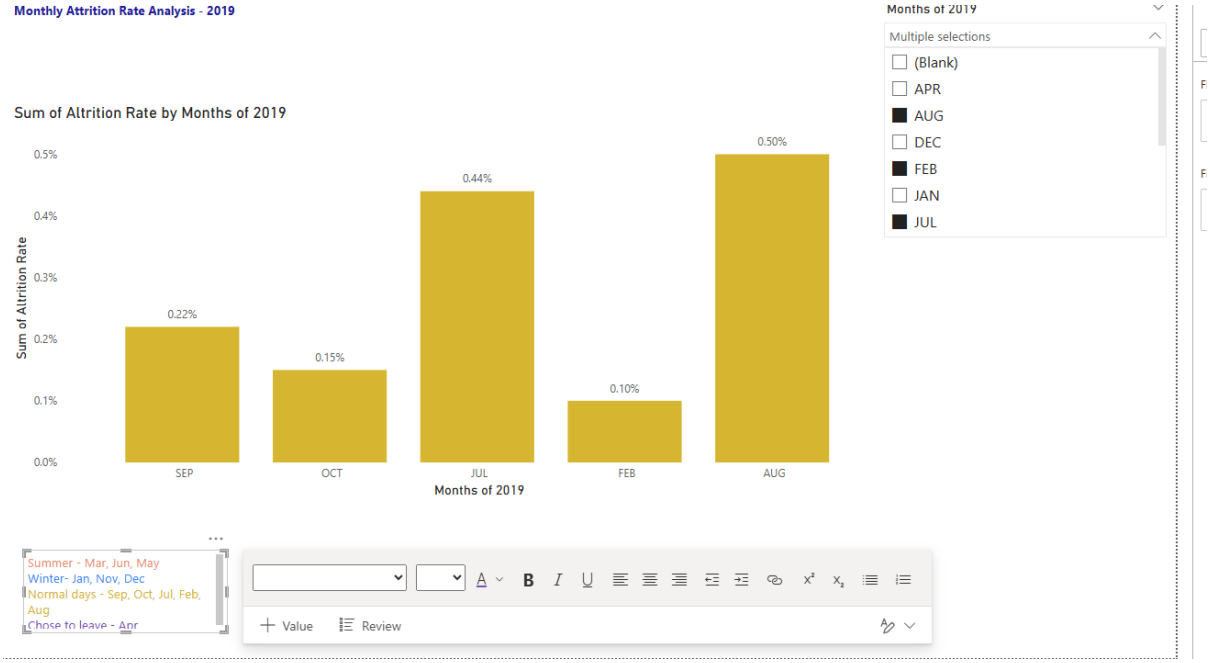
2.) Summer Attrition (March, May, June)

- May recorded the highest summer attrition rate (0.30%), with March (0.15%) and June (0.14%) showing moderate exits.
- Possible reasons: job market shifts, performance reviews, and seasonal job opportunities.



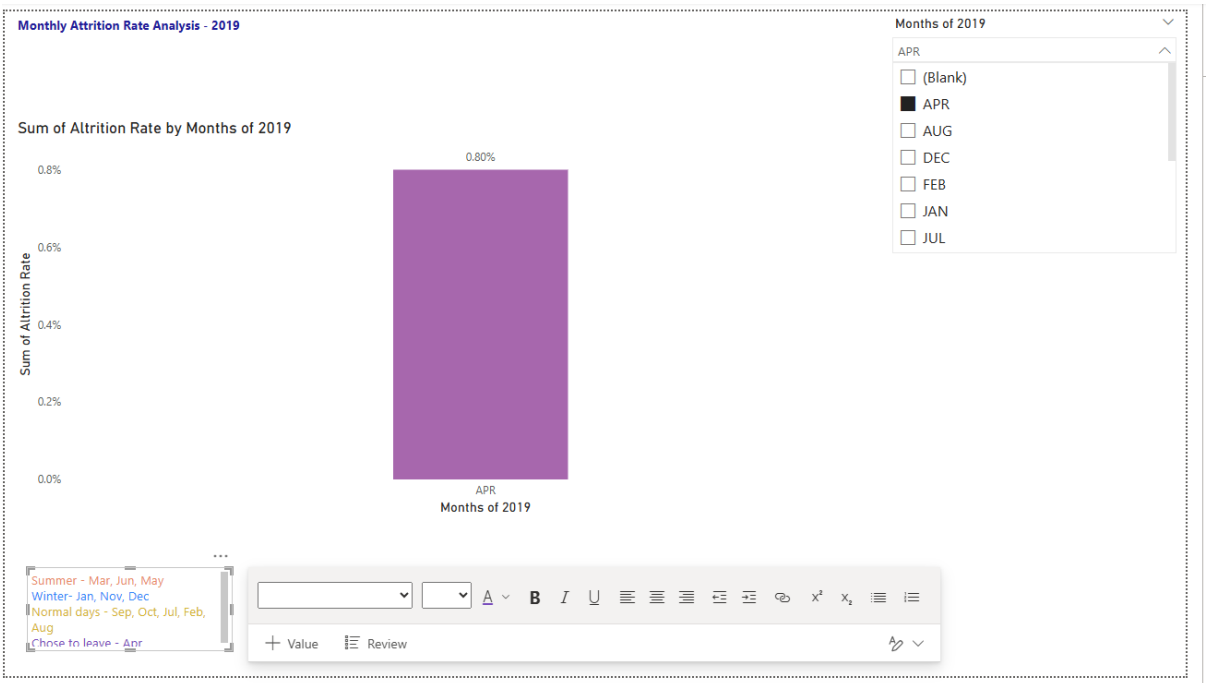
3.) Normal Attrition Months (September, October, July, February, August)

- These months exhibit balanced attrition rates without extreme highs or lows.
- Employees may evaluate job stability during this period.



4.) Chose to Leave – April

- April is uniquely categorized separately, potentially indicating a company restructuring or policy change that led to voluntary resignations.



Key Takeaways:

- Winter Retention Strategy: Employees tend to stay in November & December; organizations can use this time for career development programs.
- Summer Turnover Prevention: March - June attrition is significant, suggesting the need for incentives & engagement activities before these months.
- April Anomaly: Requires deeper investigation into workplace policies that may have triggered increased exits.

Thank you!
